

What is the run time of breadth-first search (in terms of $|V|$ and $|E|$)?

$$O(|V| + |E|)$$

What is the run time of Dijkstra's algorithm (in terms of $|V|$ and $|E|$) with a min-heap implementation?

$$O((|V| + |E|) \log |V|)$$

What is the run time of a simple implementation of Dijkstra's algorithm (in terms of $|V|$ and $|E|$) without a min-heap implementation?

$$O(|V|^2)$$

~~What~~ E

$$E \leq |V|^2$$
